

**Data sheet - Exchange case WK 45 °**

The 45 ° change box is used to change the direction of material flow within the material line system.

The advantage of the interchangeable box is that there is no interchangeable flap but a rotary valve allow a change to be carried out even during the material flow, as in contrast to an interchangeable flap, no fiber material can be pinched laterally.

The housing is made of galvanized sheet metal and the rotary valve is made of aluminum.

As a special version for, for example, the use of glass fibers, we can also supply the swap box in a Manufacture a wear-resistant version and offer the rotary valve coated.

This is equipped with valves with either a control voltage of 24 V - DC or 110 V - DC.

The interchangeable box can be supplied with or without a nozzle (diameter as required).

**We manufacture the frame widths GW: 250 mm / 300 mm / 350 mm**
